

Work Experience

Chief Technology Officer (CTO)

March 2021 - Present

- Conducted 60+ 1-on-1 product tests over Zoom with real users to receive direct feedback on platform updates
- Led a platform-wide redesign that brought 7 new features and countless usability improvements
- Designed, developed and **deployed iOS and Android CapacitorJS apps** to the Apple App Store & Google Play Store
- Converted a Firebase backend (over 20+ Firebase functions) to use ExpressJS, MongoDB and GraphQL (Apollo)
- Implemented a feedback flow using Notion's API to populate Notion docs from in-platform feedback forms
- Configured code to allow OAuth with Meta (Instagram + Facebook), Twitter & LinkedIn SDKs & APIs
- Frequently met with department heads establish timelines, review feedback and brainstorm features

Full Stack Web Developer

2018 - 2020

Arro Bedford, Nova Scotia

- Built a form builder based on a PHP backend to enable clients to create and fulfill orders
- Developed a web frontend for a virtual expo that supported 100+ simultaneous attendees and exhibitors
- Implemented a conversational algorithm for users to receive on-site automated support

Software Developer

2018 - 2019

- Developed and designed a responsive, mobile-first HTML, CSS & JS website for an national brand
- Implemented a CMS using PHP backend with a SQL database to allow admins to manage blog posts
- Engineered a dashboard with web scraping APIs to display real-time Coronavirus case numbers

Personal Projects

Paint Discord Bot

Send painted messages in Discord

github.com/JamelHammoud/paint-bot 600+ Reddit upvotes | 13 GitHub stars | 75+ Discord installs

- Developed a ReactJS frontend to allow users to paint their message on a canvas
- Implemented a DiscordJS + ExpressJS backend to respond to generate the canvas and send the user's message

Mamera

A stupidly silly app that merges photos together

- Leveraged CapacitorJS to build a ReactJS frontend into compilable Swift code for the Apple App Store
- Experimented with native APIs to access the phone's hardware from the web layer using Javascript

Hextime

Represents the time as color, using hex values.

My Skills

ReactJS, TypeScript, Python, Rust, NodeJS, Express, MongoDB, SQL, Firebase, HTML, CSS, Cloudflare and Figma.

Past Education

Dalhousie University BS Computer Science apple.com/us/app/mamera

7 GitHub stars | 340+ App Store downloads
